Subject: 301 Mission Retrofit Monitoring Report 017: Results as of August 30, 2021

CONTEXT

This memorandum summarizes results from the monitoring plan implemented at the 301 Mission property. Instrumentation to monitor the structure prior to, during and after the retrofit was installed in January 2021, including piezometers and extensometers. Settlement markers installed in April 2009 and January 2017, survey prisms mounted on the exterior of the structure in December 2016, and crack gauges installed in April 2009 have also been monitored.

INTERPRETATION

Figure 01 presents the instrument locations as referenced in later figures.

Figure 02 presents the historical settlement data interpreted from settlement markers installed on the B-1 Level of 301 Mission Tower. In addition, data from surveys performed during the retrofit are included. Figure 03A presents differential settlement data since the start of production pile installation (May 12, 2021; baseline readings on May 10, 2021) through August 30, 2021. Figure 03B presents differential settlement data since January 11, 2021, through August 30, 2021. Figure 04 presents current differential settlement contours (in inches) on August 30, 2021.

Figure 05 presents historical lateral roof deflections in the project north-south and project east-west directions interpreted from survey prisms mounted on the exterior of the Tower, from InSAR data, and from a planar fit of the settlement marker data. In addition, data from survey performed during the retrofit are included. Figure 06A presents differential lateral roof deflection data from a planar fit of the settlement marker data and from survey prisms mounted on the exterior of the Tower since the start of production pile installation (May 12, 2021; baseline readings on May 10 and 13, 2021, respectively) through August 30, 2021. Figure 06B presents differential lateral roof deflection data from a planar fit of the settlement marker data and from survey prisms mounted on the exterior of the Tower since January 11, 2021, through August 30, 2021.

Figure 07 presents the historical groundwater elevation interpreted from piezometer readings at locations near 301 Mission. In addition, data from piezometers installed to monitor groundwater elevation during the retrofit are included. Figures 08 and 09 present groundwater elevation interpreted from piezometer readings in the Marine/Colma Sand and the Old Bay Clay, respectively, for the time period prior to the start of production pile installation (January 1, 2021) through August 30, 2021.

Figure 10 presents extensometer data from within the Tower basement since the start of production pile installation (May 12, 2021) through August 30, 2021. Figure 11 presents extensometer data from Fremont

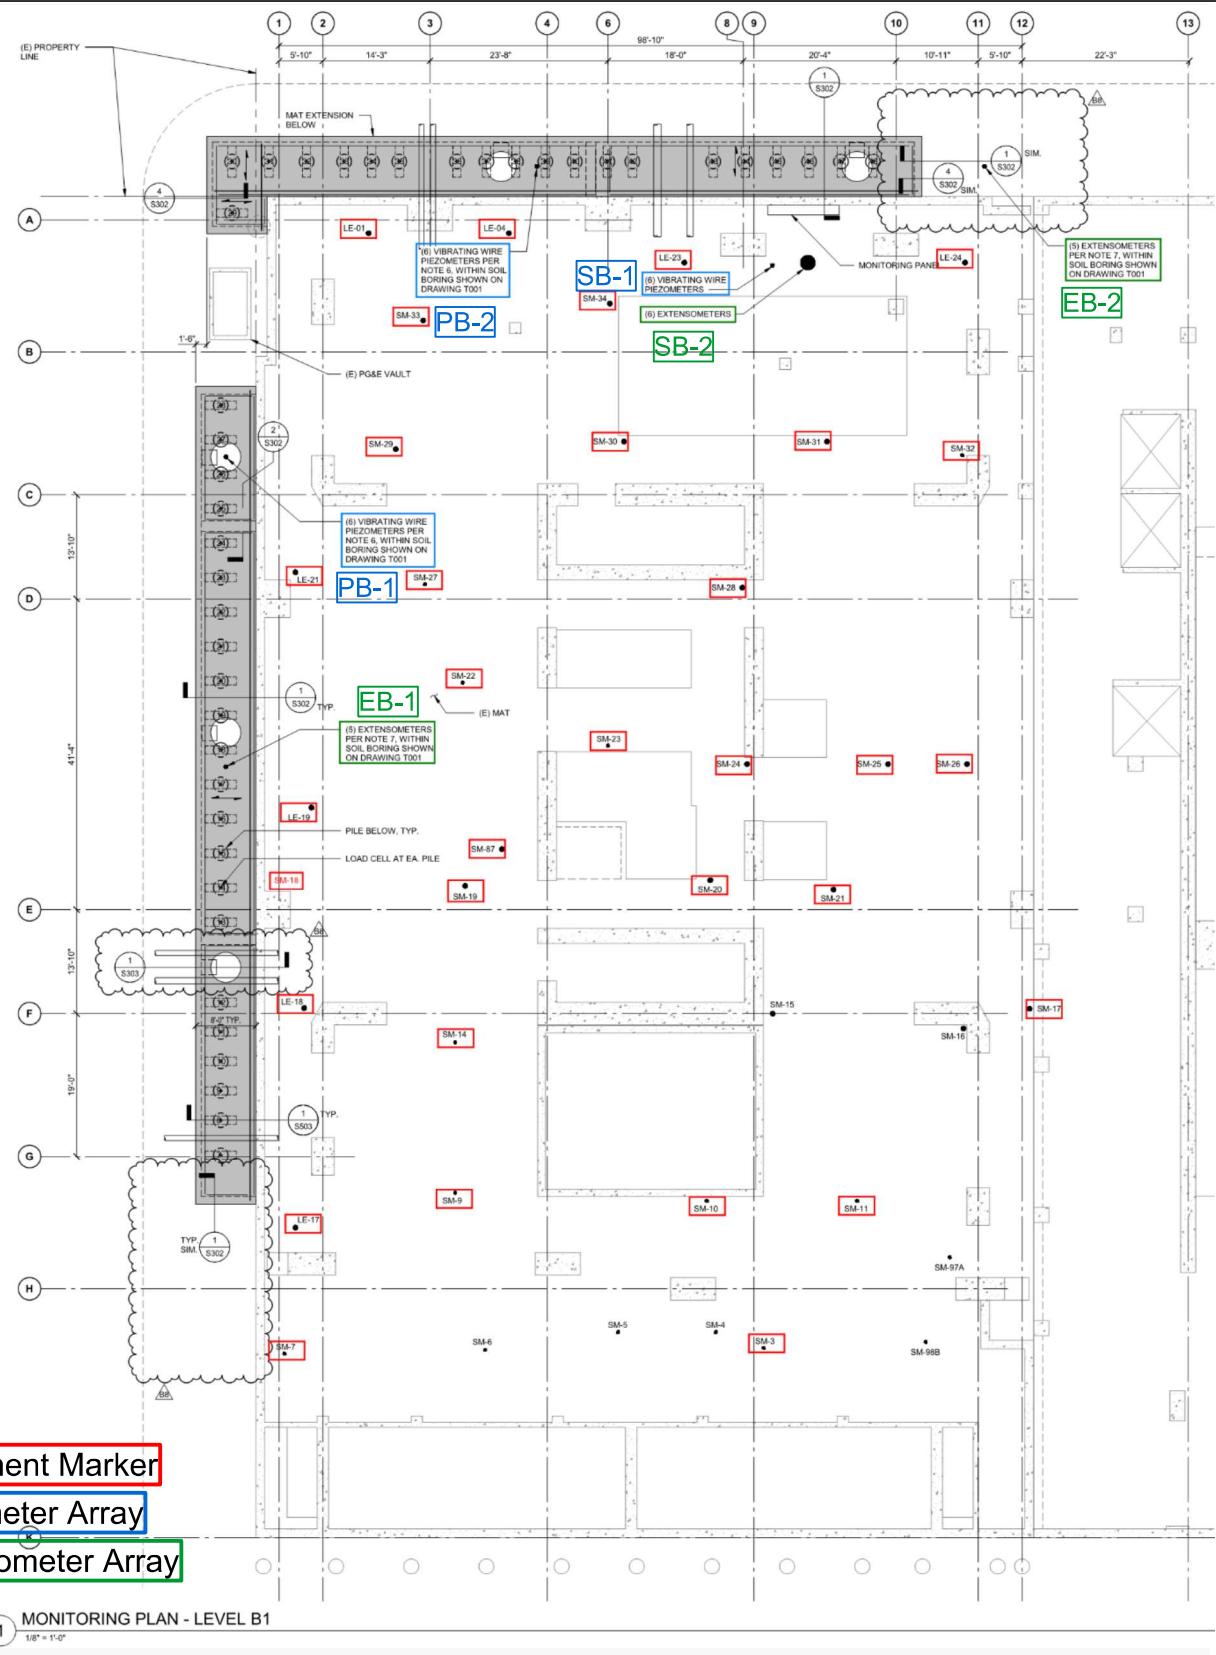

Street since the start of production pile installation (May 12, 2021) through August 30, 2021. Figure 12 presents extensometer data from Mission Street since the start of production pile installation (May 12, 2021) through August 30, 2021.

CLOSING

Please contact us if you have any comments or questions, or if you would like to discuss the results presented in this memorandum.
